Arctic animals – living

Arktaláš eallit - eallin, Arktiset eläimet - elämä

This project is about exploring the Arctic region, its countries, people, animals and environment. The project age group is 7 to 10-year-olds. Pupils produce their own study book about this project and small wooden models of Arctic animals – Arktaláš eallit. The project includes studies about sustainable thinking e.g. learning about recycling, sustainable choices in their lives and their effects on our nature. For this project I recommend to use 1-3 hours per week for 5-6 months.

I mainly teach in northern Sámi and Finnish. About 20% of our pupils are Sámi speaking.

My pupils knowledge about The Arctic and its life has grown during this project every year when I have carried it out. Years gone by, and pupils still remember this project. We do take care of our nature.
